*What is time?*

This deceptively simple question is the single most important problem facing science as we probe deeper into the fundamentals of the universe. All of the mysteries physicists and cosmologists face—from the Big Bang to the future of the universe, from the puzzles of quantum physics to the unification of forces and particles—come down to the nature of time.

The fact that time is real may seem obvious. You experience it passing every day when you watch clocks tick, bread toast, and children grow. But most physicists, from Newton to Einstein to today's quantum theorists, have seen things differently. The scientific case for time being an illusion is formidable. That is why the consequences of adopting the view that time is real are revolutionary.

Here, the author of *The Trouble with Physics* argues that a limited notion of time is holding physics back—and what we need now is a major shift in scientific thought. The *true* reality of this manmade construct could be the key to the next big breakthrough in theoretical physics—and could hold implications relevant to issues from climate change to the economy.

What if the laws of physics themselves were not ageless? What if they could evolve? *Time Reborn* offers a radical approach to cosmology that embraces the concept of time and opens up a whole new universe of possibilities.

"With rare conceptual daring, Smolin beckons toward a new perspective for doing cosmological theory . . . A thrilling intellectual ride." —*Booklist*, starred review
